### **3 ALARM OFF ROAD TOURS**

3 Alarm Off-Road Tours is an off-road Jeep tour company in Moab, Utah. We are dedicated to providing exhilarating and immersive experiences in some of the most breathtaking landscapes.

Jason Smith is the founder and a retired Firefighter/Paramedic. He loves the opportunity to see people on vacation instead of the worst day of their lives. Jason has been guiding events in Moab for over 10 years and he's been a full-time guide for the last 4 years. His chapter 2 began with Ford's Bronco Off-Rodeo program, where he was an instructor and guide. He loves helping people discover the full potential of their off-road vehicles, building their confidence and guiding them to conquer obstacles they never thought possible. He has spent the last two years doing ride along and follow along Jeep tours. Off roading is his passion and 3 Alarm Off Road Tours is your premier tour company in iconic Moab, Utah.

---

### **AE2S**

At our very core, AE2S is about people; our clients, the people they serve, and our employees and their families. We are motivated, collaborative, entrepreneurial professionals empowered to change our world, and the world of those around us. We are committed to leading the water industry in creative and innovative solutions to today's challenges, and to being partners in developing a shared vision for a better future.

We are leveraging intellect and technology to improve, optimize, and proactively enhance the lives of the people we serve and the people they serve. We give of ourselves by supporting our communities and advancing STEM programs, preparing future generations to continue our mission. Our work enables our clients to take the next steps in their organization; empowering others to take the next step in their communities.

---

### **ATMAX EQUIPMENT**

ATMAX Equipment Co. was started in 2001 by Tim Ward and his father, David Ward Jr., to build compact equipment for the landscaping and construction industries that would greatly improve the productivity and profitability of companies.

By 2006, ATMAX had developed the worlds only rubber tracked, truck mounted forklift for delivery sod and building material. However, the Great Recession hit in 2008 and ATMAX quickly realized it needed to change directions.

Tim saw an opportunity with industrial mower industry and developed a compact, heavy-duty, wide area mower for governments called the MowerMax. This lead to the development of the western hemisphere's first purpose built boom mower that was designed from the ground up to be far superior to the antiquated tractor-mounted boom mower!

---

---

## **ATSCO SALES & SERVICE**

ATSCO Sales & Service has served the Intermountain West for over 40 years. Our success comes from our solid commitment to customer service. We provide all types of industrial and commercial equipment for our customers.

---

## **BA FISCHER**

Founded in 1977, B.A. Fischer Sales Co. is a trusted agricultural irrigation wholesaler with a legacy of providing high-quality products and legendary customer service. As a third-generation, family-owned business, we have proudly served our customers for over 40 years, building a reputation for reliability, expertise, and dedication to the agricultural irrigation industry.

With multiple locations spanning across the country, we are well-positioned to serve our customers nationwide, providing everything needed for all irrigation applications. From quality products to reliable solutions, we're here to support your business at every step.

---

## **BARR ENGINEERING COMPANY**

Barr Engineering Co. is an industry-leading provider of engineering and environmental consulting services. Employee owned since 1966, we trace our origins to the early 1900s. Our engineers, scientists, and technical specialists help clients across North America and around the world benefit their communities by responsibly developing, managing, processing, and restoring natural resources.

At Barr, our professionals follow their passions. Fueled by curiosity and resourcefulness, they conquer our clients' most complex challenges. Our employee-owners thrive on developing inventive solutions for clients in a wide range of market sectors, such as the award-winning Towerside district stormwater management system project.

---

## **BEAR LAKE WATCH** **The Way It Was**

Bear Lake has existed for well over a quarter of a million years, during which time earth's tectonic movements, icing up and melting out, effected the flows and paths of the river. At times, the river was trapped in the valley and backing up to fill in to the whole of the lake valley, only to break through again and continue on its course.

Over 10,000 year ago, the natural forces of the lake's currents, wind, waves and ice combined to isolate this big lake – Bear Lake. A berm formed separating it from the waters that would flood in from the river and the marsh created by it.

When European trappers and explorers discovered this beautiful lake they described it as a "slate of glass" "the most beautiful anywhere" "incredible azure blue".

This big blue lake was naturally separated from the North Lake by a natural berm of sediment and sand that had been shaped by the action of the water over many years, maintaining its elevation from the local streams and springs mountains on the east, west and south.

At Bear Lake Watch, we are passionate about advocating for the responsible management and use of Bear Lake's resources through scientific research, data collection, education, policy guidance and collaboration.

---

---

## **BROWN & CALDWELL**

Brown and Caldwell's purpose traces back to two founders who had a vision: 100 percent environmental. It's who we are, it's what we have always been, and it's who we will always be. Our 1,900 employee-owners are all working toward a common goal: to make a positive impact on our environment and in our world.

---

## **CAMPBELL SCIENTIFIC**

Our Mission:

We at Campbell Scientific, Inc., are committed to satisfying the measurement instrumentation needs of our customers, especially those who are working to advance science and technology for the benefit of humankind.

Satisfying customer needs since 1974.

We are a leading designer and manufacturer of data loggers, data acquisition systems, and measurement and control products used worldwide in a variety of applications related to weather, water, energy, gas flux and turbulence, infrastructure, and soil. We specialize in rugged, low-power systems for long-term, stand-alone monitoring and control.

At Campbell Scientific, we are proud to be internationally recognized in the measurement and control industry for producing accurate and dependable instruments.

---

## **CENTRAL UTAH WATER CONSERVANCY DISTRICT**

The mission of the CENTRAL UTAH WATER CONSERVANCY DISTRICT (CUWCD) is to find ways to develop, manage, and deliver water for Utahns now and in the future. ## **GK DENOS CONSULTING**

With over 30 years' experience in Water Resources engineering and management, including 28 years as general manager of a \$250M asset water district, G. Keith Denos, P.E. understands your challenges and is uniquely qualified to help you find the most effective solutions through GK Denos Consulting, LLC.

Keith has developed and overseen large water infrastructure projects from conception through construction and was the primary champion and facilitator for the \$150M Provo Reservoir Canal Enclosure Project and the \$100M Deer Creek Intake Project, performing a key role in securing funding for both monumental projects. In his role as general manager of Provo River Water Users Association, the sponsor of Reclamation's Provo River Project, Keith oversaw all management and operations of Deer Creek Dam and Reservoir and its average annual 100,000 acre-foot water supply conveyed through large canals, pipelines, and tunnels for irrigation and M&I uses. Keith has decades of experience working with federal and state lawmakers and has been instrumental in the passing of favorable state and federal legislation, including a successful title transfer from Reclamation to the Association. Keith has served on many water boards, committees, and task forces and is active in water policy issues and discussions. Prior to his work with Provo River Water Users Association, Keith was a consulting engineer in the private sector. Keith is a professional engineer registered in Utah, and has earned a Bachelor's degree in Civil & Environmental Engineering and a Master's degree in Irrigation Engineering, both from Utah State University. Keith also holds an MBA with a finance emphasis from Utah Valley University. Keith and his sweetheart Cindy have been married for almost 38 years and are blessed with five children and 14 grandchildren who are the light of their lives.

---

## **HUESKER, INC.**

HUESKER manufactures eco-friendly geosynthetics known for their long term design strength and durability. HUESKER offers the most complete product line of geogrids, geocomposites and geotextiles that deliver cost effective geotechnical engineering solutions. Our projects are governed by numerous factors, most of which are on our radar. Our decades-long track record in the vast field of geotechnics provides us with an in-depth understanding of the associated challenges and enables us to overcome seemingly insurmountable obstacles by developing efficient solutions.

We live 'excellence' and relentlessly strive to improve our products so that we can excite our customers even more. Our ingenuity in delivering solutions makes us your partner of choice in shaping the future, not just by forward thinking, but also by forward-thinking action.

---

## **HYDRO SPECIALTIES, INC.**

We are adept at designing, based on the needs of the communities we serve. Sunrise assists creatively finding a solution to a community's needs, as well as assisting with funding, community education and communication, system startup and operation.

---

### **U.S. GEOLOGICAL SURVEY**

The U.S. GEOLOGICAL SURVEY (USGS), a bureau of the U.S. Department of the interior, provides reliable scientific information to describe and understand the earth; minimize loss of life from natural disasters; manage water, biological, energy, and mineral resources; and enhance and protect the quality of our Nation's natural resources. USGS Utah Water Science Center scientists conduct investigations on the quantity and quality of Utah's water-related resources and provide science support for Federal, State and local cooperators. We measure surface water at over 139 sites throughout the state along with nearly one thousand groundwater wells. The USGS Cooperative Water Program supplies approximately 1.5 million dollars of direct science support annually to water-related projects in Utah, frequently through cooperative arrangements with state and local natural resource agencies. This year's booth will highlight some of the current USGS earth-science activities in Utah and will have a live Web-link to real-time data and new geographic information systems-based analysis tools. Visit our Web site at <http://ut.water.usgs.gov/> for additional information on Utah's water resources.

---

### **UTAH DEPARTMENT OF AGRICULTURE & FOOD**

UDAF is made up of 9 divisions that serve the citizens of Utah and the agricultural industries by insuring safe food and fiber, promoting ag producers, and protecting the environment for sustainable agriculture in the state. The divisions include: Office of the Commissioner, Admin Services, Animal Industry, Cannabis, Conservation, Industrial Hemp, Laboratory, Plant Industry, and Regulatory Services. The Department's divisions are guided by the following vision and mission statements.

Vision: The vision of the Utah Department of Agriculture and Food is to lead Utah towards self-reliance by promoting, preserving, and protecting all forms of agricultural production and processing to ensure a safe and abundant supply of locally produced foods for all Utahns.

Mission: The mission of the Utah Department of Agriculture and Food is to support the development of Utah's agriculture and food industries, serve as a steward of our natural resources, safeguard public health, protect consumers, and ensure a quality food supply.

---

---

---

## **YOUNG AUTOMOTIVE GROUP**

The Young Automotive Group was founded by Seldon "Jack" Olsen in Morgan County in 1924. After signing an Oldsmobile selling agreement, he opened a dealership and sold his first vehicle to Mountain Green resident O.W. Rollins.

Looking to expand the company in 1926, Olsen bought the Parkinson building in Morgan and converted it into a dealership. He hosted a dance on New Year's Eve to celebrate the grand opening. Three years later, he signed his first Chevrolet contract.

The struggles that plagued the country during the Great Depression challenged Olsen as well. He was forced to repossess 41 cars in 21 days due to new manufacturer loan requirements. Olsen even had to resort to bartering at times, providing vehicles and maintenance for goods and services.

Along with economic struggles, Olsen faced tragedies during the decade. In 1935, our Morgan dealership burned to the ground, and he acquired severe injuries while retrieving a cash register as well as a few tools.

Despite the setbacks, Olsen kept his sights set on expansion. In 1948, he opened Olsen Chevrolet on Main Street in Layton - beginning an operation that stands to this day. During the early 1950s, Olsen hired his son-in-law, Sam Young, as a bookkeeper at the business.
